Summary

Digital Forensics and Cyber Security graduate with hands-on experience in digital investigations, cybercrime analysis, incident response, and security research through internships with Punjab Police and the Digital Forensics Research and Service Center (DFRSC). Experienced in Linux environments, Capture The Flag (CTF) competitions, and developing open-source security solutions. Passionate about solving complex security challenges, continuously expanding technical expertise, and contributing to the protection of modern digital infrastructure.

Experience

02/2026 – 04/2026

Student Intern

Lahore, Pakistan

Punjab Police

Completed a 6-week rotational internship with Punjab Police, gaining practical exposure to cybercrime investigations, digital evidence handling, forensic procedures, and law enforcement operations. Worked alongside multiple investigative units, strengthening skills in digital forensics, cybersecurity, and investigative workflows while developing a strong understanding of real-world cybercrime response.

09/2021 – 02/2026

Student/Research Trainee

Lahore, Pakistan

Digital Forensics Research and Service Center (DFRSC)

Assisted in digital forensics research and cybersecurity activities, gaining practical experience in evidence acquisition, forensic analysis, incident investigation, and cyber threat assessment. Participated in hands-on projects, technical research, and laboratory work while strengthening analytical and problem-solving skills.

Education

09/2021 – 02/2026

Bachelor's Degree, Digital Forensic and Cyber Security

Lahore Garrison University

Completed a Bachelor's degree in Digital Forensic and Cyber Security, gaining a strong foundation in digital investigations, network and system security, incident response, ethical hacking, and cyber threat analysis. Developed practical skills through hands-on labs, cybersecurity projects, and forensic analysis.

2019 – 2021

Intermediate, Computer Science

Punjab Group of Colleges

Completed Intermediate in Computer Science with a focus on computer fundamentals, programming concepts, mathematics, and analytical problem-solving, building a strong foundation for higher education in cybersecurity and digital forensics.

2017 – 2019

Matriculation, Computer Science

The Trust School

Completed Matriculation in Computer Science, developing a foundational understanding of computer systems, basic programming concepts, mathematics, and logical reasoning while strengthening analytical and problem-solving skills.

Licenses & Certifications

05/2026	Introduction to Offensive Security with Artificial Intelligence <i>Red Team Leaders</i> Gained foundational knowledge of integrating artificial intelligence into offensive security, including red team methodologies, AI-assisted reconnaissance, threat simulation, and modern cybersecurity techniques.
04/2026	ISC2 Candidate <i>ISC2</i> Registered as an ISC2 Candidate, demonstrating commitment to professional development and pursuing internationally recognized cybersecurity certifications.
09/2025	Certified white hat Hacker <i>Digital Forensics Research and Service Center (DFRSC)</i> Completed training in ethical hacking and cybersecurity, covering penetration testing fundamentals, vulnerability assessment, reconnaissance techniques, web application security, network security, and responsible disclosure practices.
09/2025	Certified computer forensics analyst <i>Digital Forensics Research and Service Center (DFRSC)</i> Completed training in computer forensics, including digital evidence acquisition, forensic imaging, file system analysis, incident investigation, evidence preservation, and forensic reporting using industry-standard methodologies and tools.
03/2026	Certified Blue Team Practitioner (CBTP-MOCK-EXAM) <i>The SecOps Group (Creators of PentestingExams.com)</i> Demonstrated practical knowledge of blue team operations, including threat detection, incident response, log analysis, security monitoring, and defensive cybersecurity techniques through a hands-on mock certification assessment
02/2026	Cybersecurity for Kids v1 <i>Red Team Leaders</i> Completed training focused on foundational cybersecurity concepts, online safety, cyber threats, secure digital practices, and effective communication of cybersecurity awareness for beginners and young learners.
02/2026	Foundations of Log Analysis for Cyber Defense <i>Red Team Leaders</i> Developed foundational skills in security log analysis, event correlation, threat detection, and incident investigation using logs from operating systems, network devices, and security tools to support effective cyber defense.
02/2026	SQL Injection Attacks <i>EC-Council</i> Learned SQL injection techniques, common attack vectors, vulnerability identification, secure coding practices, and mitigation strategies to protect web applications and databases against injection-based attacks.
02/2026	Introduction to Dark Web, Anonymity, and Cryptocurrency <i>EC-Council</i> Gained foundational knowledge of the dark web ecosystem, online anonymity technologies, cryptocurrency fundamentals, and their applications in cybersecurity, digital investigations, and cybercrime analysis
02/2026	Make In-house Hacking and Pentesting Lab <i>EC-Council</i> Learned how to design and build a secure in-house penetration testing lab using virtualized environments for ethical hacking, vulnerability assessment, exploit testing, and cybersecurity skill development.

12/2025	Certified Cybersecurity Educator Professional (CCEP) <i>Red Team Leaders</i> Developed the knowledge and skills to effectively teach cybersecurity concepts, create engaging learning content, deliver technical training, and promote cybersecurity awareness using industry best practices.
12/2025	Introduction to Bug Bounty <i>Red Team Leaders</i> Learned the fundamentals of bug bounty programs, including vulnerability identification, responsible disclosure, reconnaissance techniques, web application testing, and reporting security findings in accordance with ethical hacking best practices.
02/2025	Essential Google Cloud CLI Tools <i>Google</i> Learned to use the Google Cloud Command Line Interface (CLI) for managing cloud resources, configuring environments, automating administrative tasks, and interacting with Google Cloud services efficiently.
01/2021	Microsoft Office Specialist: Word (Office 2016) <i>Microsoft</i> Demonstrated proficiency in Microsoft Word 2016, including document creation, advanced formatting, templates, tables, references, collaboration features, and productivity best practices.
01/2025	Operating Systems Basics <i>Cisco</i> Gained foundational knowledge of operating systems, including process and memory management, file systems, user administration, command-line operations, and system security across Windows and Linux environments.
11/2024	Introduction to Cybersecurity <i>Cisco</i> Developed a foundational understanding of cybersecurity principles, including cyber threats, attack vectors, risk management, network security, security best practices, and strategies for protecting digital systems and data.

Projects

11/2025 – 02/2026	Get Winfig  Winfig is an open-source Windows configuration and automation framework designed to streamline system deployment, customization, hardening, and workspace setup. Built with a modular and reproducible architecture, it automates Windows environment provisioning, security configuration, debloating, and developer workstation setup, enabling users to create consistent, secure, and fully customized systems with minimal manual effort.
04/2025 – 08/2025	Intrudex  <i>Sigma based IPS/IDS</i> Intrudex is a Sigma-based Intrusion Detection and Prevention System (IPS/IDS), specifically designed for Windows environments. It features a hybrid architecture, combining the efficiency of a C++ Windows client for real-time log monitoring with a Python Flask-based server for centralized management and a web dashboard.
